EDUCATION

B.Tech — CS & Technology
Dayananda Sagar University
2024–2027 • CGPA: 6.67

Diploma — Polytechnic CS
SVIT Polytechnic
2017–2021 • 57.32%

Secondary (Class 1–10)
Lourde High School, Bangalore
2007–2017 • 56.64%

CERTIFICATION

Data Analytics with Python
NPTEL (Completed)

LANGUAGES

- Python
- TypeScript / JavaScript
- Java
- C / C++
- Kotlin
- Lua

WEB & FRAMEWORKS

- Vue.js
- HTML5 / CSS3
- REST API & Webhooks
- Full-Stack Development

TOOLS & CONCEPTS

- Git
- GitHub
- Agile
- Lean Startup
- Mocha Pro
- Edge AI
- LLM
- IoT

RECOGNITION

- 🏆 **3rd Place**
Eurekathon — CoFarm (DSU)
- 🏆 **Round 2 Qualifier**
Manthan Innovation 2026
- 🌐 **Global Nominee**
NASA Space Apps Challenge
- 🚀 **Participant**
IBM Hackathon

PATENT

- 🔬 **UFI Patent**
Universal Filter Interface
Modular Air Purification System
Published Application

Professional Summary

Engineering student (B.Tech CS&T) with a multidisciplinary background spanning **full-stack web development**, **custom hardware architecture**, and **VFX production pipelines**. Proven innovator with a **published patent**, wins at Eurekathon and NASA Space Apps, applying Lean Startup, AI workflows, and decentralised architectures to build secure, user-centric products.

Featured Projects

CoFarm — Distributed Agricultural Intelligence

TypeScript Vue.js Edge AI Decentralised

- Privacy-first agritech platform enabling farmer threat-intelligence sharing via **edge anomaly detection** and **decentralised consensus**.
- Integrated **LLM-powered actionable insights** in a 24-hr hackathon sprint; **3rd Place, Eurekathon (DSU)**. 🔗

Cashtip — Real-Time Streamer Tip & Overlay Platform

Vue.js TypeScript StreamElements API Webhooks

- Built a **webhook + API pipeline** with StreamElements triggering on-screen browser overlays instantly upon payment verification.
- Engineered high-availability UI in **Vue.js + TypeScript** with secure async requests optimised for viewer engagement.

Compact Air Purification System

Hardware PLA Chassis USB-C IoT Lean Startup

- Lean Startup feedback loops drove cost to **Rs. 3,000–3,500**; biodegradable PLA chassis + USB-C; airflow tuned to **<40 dB**.
- Currently in **Manthan Innovation Challenge 2026 — Round 2**; IoT smart monitoring on the next-lifecycle roadmap.

Other Repositories

Kotlin Python IBM watsonx

- Wallpaper** 🔗
Live shared interactive canvas synced across two Android devices in real time (Kotlin).
- TS Music Bot** 🔗
Feature-rich TeamSpeak music bot — queue management, playback controls (Kotlin, GPL v3).
- steam-lua-gen** 🔗
Desktop GUI generating DepotDownloader Lua scripts with auto key-fetch (Python).
- IBM Watsonx** 🔗
Autonomous agent prototype built at IBM Hackathon via watsonx Orchestrate (Python).

Professional Experience

VFX Rotoscope Artist
Radiance VFX

May 2022 – Nov 2022

- Delivered production roto assets for *The Flash* and *Black Panther: Wakanda Forever* using **Mocha Pro** — complex articulation mattes for motion-heavy sequences.
- Maintained absolute **shot consistency** under rigorous studio pipelines and hard delivery deadlines.

Patent & Key Innovation

Universal Filter Interface (UFI) — Modular Air Purification

Published Patent Application

- Novel modular interface housing **multiple filter types** (HEPA, activated carbon) interchangeably with **zero chassis modifications** required.
- Solves a consumer-electronics affordability constraint: simpler replacement, **significantly lower production overhead**.
